

Wholehog v3.2.2 Release Notes

Version: 3.2.2 (3337) October 24, 2011

Wholehog 3, Hog 3PC, Road Hog Full Boar, Hog iPC, Road Hog

Version 3.2.2 b3337 is a software update for Wholehog 3, Hog 3PC, Full Boar, Hog iPC, and Road Hog that contains bug fixes and performance enhancements.

Installation Instructions

The Wholehog 3 Console can only be upgraded to v3.2.2 using the Full Install ISO. All other Wholehog consoles (Road Hog, Hog iPC, Full Boar, Hog3PC) can be upgraded to v3.2.2 from v3.2.0 or greater using the Hog3PC MSI installer and the normal upgrade procedure. If you are running v3.1.9 or older you must first run a full system restore using the latest v3.2.0 or greater compatible restore image.

Note: All DP8000s will “net boot” into a full restore and reset their net and port number settings when upgraded to v3.2.2.

Show File Compatibility Notice

Shows created on or saved with v3.2.2 software cannot be loaded on software older than v3.1.8. In some cases running check integrity might be required to load the show file on v3.1.9 or v3.1.8.

Performance Enhancements

Version 3.2.2 improves onscreen drawing performance of encoder wheel toolbar values when working with a large number of fixtures at one time.

Show Server/Client Improvements

In software version 3.2.2 if the primary server console in the network loses power or suffers a fatal server error, all client consoles and DPs connected to the show will remain online and active even if a secondary failover sever console is not present on the network. When this situation occurs client consoles will display a pop-up message indicating that there is no longer an active show server console on the network. When in this condition no new show data can be recorded into the show file and only existing show data can be played back. Note: if a primary server console is logged off on purpose and there are no other server consoles on the network then all connected DPs and client consoles will automatically log off as well.

New Features

A new “MIDI” button has been added to the bottom right screen toolbar when holding the open key. Pressing this button will open a dedicated midi viewer that will show incoming and outgoing Midi Show Control messages as well as incoming Midi notes. Note: midi timecode messages are not posted in this window.

Wholehog v3.2.2 (Build 3337) Bug Fixes

Bug #15370: Xwing backlight gets confused on first backlight timeout

Bug #15375: Effect length wrapping 0% to 400% when adjusted on encoder

Bug #15377: Encoder wheel drawing performance bad with 150+ fixtures

Bug #15408: Linux sometimes creating bad backups to USB sticks

Feature #15447: Add Midi Viewer Window (MSC and Midi Notes)

Bug #15450: Support for new LTC/MIDI combo widget

Bug #15492: HogNet Adapter causing connectivity problems on some H3 Consoles

Bug #15500: Server crash when clone DP8K and patch conflict exists (AL Show)

Bug #15505: Set the Mount Count Check to never (file system check)

Bug #15510: Playback/Desktop crash when hitting next page then playing scenes

Bug #15511: Add support for the 2270 video card (Road Hog)

Bug #15525: Relax server loss detection on single console systems

Bug #15535: DP8K Process crash merging single library into HOA test show file
